INSTALL INSTRUCTIONS

Clutch Cover

What's Included

1 Billet Clutch Cover
Lockup Mechanism
Mounting Bolts / O-Rings
Outer Ring & Lens

Tools Needed

Torque Wrench

01 Torque water pump bolts to 8 foot pounds in a criss cross pattern.

02 Repeat step 1 a couple of times.

03 Re-torque one time after your first heat cycle. Be sure to do this after it has cooled down fully.

This cover requires a special-thickness gasket, available separately from us. Do not use standard-thickness gaskets. Do not apply Loctite, chemicals, or oils to any Lexan surfaces. Do not use a billet water pump drive gear in place of the original plastic gear, as this can damage both the engine and cover.
